

Dieter Radaj

Welding residual stresses and distortion

Calculation and measurement

Contents

Preface to the English edition	VII
Preface to the German edition	VIII
List of symbols	IX
1 Introduction	1
1.1 Contents of the book	1
1.2 Description of phenomena	5
1.3 Structuring of the contents and general literature references	14
2 Modelling of welding temperature fields	16
2.1 Significance, contents and application of the heat conduction model	16
2.2 Distributed heat sources	23
2.3 Governing equations of heat conduction	30
2.4 Temperature fields around momentary concentrated heat sources	34
2.5 Temperature fields around continuous concentrated heat sources	37
2.6 Temperature fields around momentary and continuous distributed heat sources	46
2.7 Temperature fields around rapidly travelling high-power sources	51
2.8 Temperature fields in dimensionless parameters	53
2.9 Application of the linear heat conduction model to more complex problems	62
2.10 Peak temperature, cooling rate, cooling time and dwell time	67
2.11 Heat conduction analysis based on numerical methods	84
3 Modelling of welding residual stresses and distortion	100
3.1 Fundamentals of the model	100
3.2 Elastic-plastic material behaviour and finite element method	107
3.3 Rod element model	121
3.4 Ring element model	132
3.5 Thin plate element model with plane stress	157
3.6 Cross-sectional plate or solid element model with plane strain	165
3.7 Shell or plate element model	182
3.8 Solid element model	185
3.9 Elastic thermal stress model	201
3.10 Elastic shrinkage force model	208
3.11 Elastic residual stress source model	231
3.12 Shrinkage and distortion models	250
3.13 Buckling distortion models	264
3.14 Model integration into strength analyses	272
4 Thermodynamic and thermomechanical material properties	287
4.1 Overview	287
4.2 Thermodynamic material properties	287
4.3 Thermomechanical material properties	294
4.4 Combined diagrams with material properties	302
4.5 Material properties related to microstructural transformation	307
4.6 Stress relaxation by annealing	320

VI Contents

5	Measuring methods for temperature, residual stresses and distortion	328
5.1	Outline and significance	328
5.2	Temperature measuring methods	328
5.3	Residual stress measuring methods	332
5.4	Distortion measuring methods	350
5.5	Similarity relations for test models of welds	356
	Bibliography	359
	Index	392
