Welding in Shipbuilding

Lectures of International Conference of the International Institute of Welding (IIW)

Hamburg, Germany, September 17 – 18, 1998

Organizer:
DVS - German Welding Society, Düsseldorf
Table of contents

Foreword

Houdremont Lecture
H.-J. Warnecke, Munich, Germany
A successful research management for innovative technologies and products ... 1

Keynote address 1
T. Andersen, Odense, Denmark
Shipbuilding beyond year 2000 ................................................................. 4

Keynote address 2
J. Gustafsson, Rostock-Warnemünde, Germany
Robotized welding applications in the shipyard industry .......... 8

T. Miyazaki, Kumamoto-Pref., Japan
Mechanisation and automation in shipbuilding .............................. 14

G. Zhou, Beijing, Z. Yu, F. Zhou, X. Li and X. Gu, Zhengjiang, China
Welding and automation in China shipbuilding industry ............ 20

M. Sellerup, Odense, Denmark
Experiences of laser welding and cutting in hull production .......... 25

T. Nomoto, Tokyo, Japan
Factory simulation based on shipbuilding CIM ............................. 28
Keynote address 3

H. G. Payer, Hamburg, Germany

Future ship design – a challenge to classification societies ...................... 34

O. Aanensen and O. Dahl, Haugesund, Norway

Friction stir welding of fast ferries in aluminium .................................... 41

M. Stemvers, Utrecht, The Netherlands

The advantages of cored wire welding in the fabrication of ship structures .... 43

Y. Sugitani and Y. Kanjo, Tsu, Japan

Multi-robot welding system in shipbuilding ............................................. 52

A. Kahl, Hamburg, Germany

Compact shipyard ..................................................................................... 60

W. G. Woollen, North Lincolnshire, United Kingdom

Modern steels for shipbuilding ................................................................. 64

K. Decker, Karben, Germany

Cutting trends – experiences from five installations worldwide .................. 69
