

Klaus Matthies a.o.

***Thickness Measurement
with Ultrasound***

Table of contents

1	Scope	13
2	Terms	14
3	Basic Principles	15
3.1	Basic Terms	15
3.1.1	Oscillation	15
3.1.1.1	Deflection.....	16
3.1.1.2	Amplitude	16
3.1.1.3	Phase.....	16
3.1.1.4	Oscillation Time	17
3.1.1.5	Frequency	17
3.1.1.6	Oscillation with or without Damping.....	17
3.1.2	Waves	18
3.1.2.1	Propagation Velocities	18
3.1.2.2	Wave Length.....	18
3.1.2.3	Wave Front.....	19
3.1.2.4	Interference.....	19
3.2	Sound Waves.....	19
3.2.1	Wave Modes	20
3.2.2	Sound Velocity	21
3.3	Sound Pressure.....	23
3.3.1	Characteristic Impedance	23
3.3.2	Interfaces.....	23
3.3.3	Sound Reflection and Sound Transmission.....	24
3.4	Continuous Wave	25
3.5	Pulsed Sound Waves.....	26
3.6	Reflection and Refraction.....	26
3.7	Sound Fields.....	28
3.7.1	Near Field.....	28
3.7.2	Far Field	29
3.7.3	Directivity Pattern	30
3.7.4	Focusing.....	30
3.8	Sound Attenuation	30
3.8.1	Absorption	31
3.8.2	Scattering.....	31
3.8.3	Sound Attenuation Coefficient.....	32
3.8.4	Radiation Laws	32
3.8.5	Units of Amplitude	34

4	Measurement Techniques	36
4.1	Equipment Function	36
4.1.1	Equipment with A-scan Display	37
4.1.1.1	Analogue Equipment	37
4.1.1.2	Digital Equipment	41
4.1.2	Digital Indication of Thickness Measuring Gages.....	42
4.2	Probes.....	45
4.2.1	General	45
4.2.2	Piezoelectric Effect.....	45
4.2.3	Single Transducer Straight or Normal Beam Probe	47
4.2.4	Single Transducer Straight Beam Probe with Delay Path	48
4.2.5	Dual or Twin Probes (TR-probes).....	49
4.2.6	Probes for High Temperature Applications.....	51
4.2.7	Electrodynamic Probes	54
4.2.7.1	General	54
4.2.7.2	Principle of Electrodynamic Ultrasonic Generation.....	54
4.2.7.3	Construction of Electrodynamic Transducers (probes).....	56
4.3	Auxiliary Equipment	58
4.3.1	Calibration Blocks.....	58
4.3.2	Coupling Medium.....	59
4.4	Hints for Determination of the Efficiency of Test Systems	59
4.4.1	General	59
4.4.2	Control of Time Base Linearity	60
4.4.3	Control of Indications with Curved Surfaces	60
4.4.4	Control of Indications from Small Flat-bottom Holes	62
4.4.5	Control of Thickness Measurement in the Case of Corroded Backwall Surface.....	62
5	Ultrasonic Thickness Measurement Methods	64
5.1	Introductory Remarks.....	64
5.2	Evaluating Methods with Ultrasonic A-scan Equipment	64
5.2.1	Definition of Application as Compared to Instruments with Digital Indication.....	64
5.2.2	General	65
5.2.3	Measuring Methods	66
5.2.3.1	Simple Length Measurement.....	66
5.2.3.2	Measurement with Zero Displacement	67
5.2.3.3	Multiple Echo Method.....	68
5.2.4	Measuring Methods with Delay Path Probes.....	70
5.2.4.1	Single Transducer Probe with Delay Path.....	70
5.2.4.2	Measurement with Twin Probe.....	72

5.3	Evaluation Techniques of Commercially Available Digital Instruments	74
5.3.1	Survey	75
5.3.2	Instruments with Single Transducer Probes	78
5.3.2.1	Evaluation Methods	78
5.3.2.1.1	Straight Beam Probe without Delay Path	78
5.3.2.1.2	Straight Beam Probe with Delay Path	79
5.3.2.2	Methods of Time Gate Generation	82
5.3.3	Instruments with Twin Probes	85
5.3.3.1	Evaluation Techniques	85
5.3.3.2	Time Gate Generation	88
5.4	Frequency Measuring Methods	89
5.4.1	Resonance Method	89
5.5	Other Nondestructive Measuring Methods	91
5.5.1	Eddy Current Method	91
5.5.2	Magnetic Methods	93
5.5.3	Method Using Ionizing Radiation	95
5.5.3.1	Radiographic Examination	95
5.5.3.2	Back Scatter Method	100
5.5.4	Thickness Determination via Distance Measurement	101
5.5.4.1	Distance Measurement with Laser Optical Method (light point triangulation)	102
5.5.4.2	Distance Measurement Using Ultrasound (airborne sound)	103
5.5.5	Microwave Method	104
5.5.6	Shearography	106
5.5.6.1	Principal	106
5.5.6.2	Sherographic Pipe Examination	108
5.5.6.3	Measuring Sensitivity	109
6	Influencing Variables and Limitations with Ultrasonic Thickness Measurement	111
6.1	Equipment Influences	111
6.1.1	Equipment with A-scan	111
6.1.1.1	Influence of Equipment on the Measuring Uncertainty	111
6.1.1.2	Time Base Range	111
6.1.1.3	Reading Accuracy	112
6.1.1.4	Linear Deviation of the Horizontal Deflection	112
6.1.1.5	Echo Height Adjustment	112
6.1.2	Thickness Gages with Digital Indication	114
6.1.2.1	Influence of the Gages on the Measuring Uncertainty	114

6.1.2.2	Time Base Range.....	115
6.1.2.3	Reading Uncertainty.....	116
6.1.2.4	Deviation of Linearity	116
6.2	Influences of the Probe.....	117
6.2.1	Frequency	117
6.2.2	Diameter.....	119
6.2.3	Constructional Features.....	119
6.2.3.1	Single Transducer Straight Beam Probe without Delay Path....	119
6.2.3.2	Single Transducer Straight Beam Probe with Delay Path.....	119
6.2.3.3	Twin Probes	120
6.2.3.4	Special Probes	120
6.3	Influencing Factors on the Instrument-Probe-System.....	120
6.3.1	Temperature Influences.....	120
6.3.2	Influence of Ageing	121
6.3.3	Influence of Fluctuation of Supply Voltage.....	121
6.3.4	Influence of the Probe Cable	121
6.3.5	Electromagnetic Compatibility (EMC).....	122
6.4	Influence of the Couplant.....	122
6.4.1	General	122
6.4.2	Couplant for Room Temperature.....	123
6.4.3	Couplant for Higher Temperatures	123
6.5	Influences of the Test Object	126
6.5.1	Geometry Influences	127
6.5.2	Surface Conditions	128
6.5.2.1	Manufacturing Surface Conditions.....	128
6.5.2.2	Corrosion	128
6.5.2.3	Coatings.....	129
6.5.3	Influence of the Material	130
6.5.3.1	Sound Attenuation	130
6.5.3.2	Sound Velocity	131
6.6	Cast Iron Materials	133
6.6.1	Introduction.....	133
6.6.2	Basic Material Science	133
6.6.2.1	General	133
6.6.2.2	Cast Steel	136
6.6.2.3	Cast Iron	137
6.6.3	Thickness Measurement Using Ultrasonics on Cast Iron Materials	146
6.6.3.1	Measurement of Cast Steels.....	146
6.6.3.2	Measurement of Cast Iron	147
6.6.4	Applications	152
6.7	Temperature Influences.....	154

6.8	On the Precision of Ultrasonic Thickness Measurement.....	156
6.8.1	Determination of the Measuring Uncertainty.....	156
6.8.2	Influences on the Measuring Uncertainty.....	161
6.9	Personal Qualification.....	162
7	Performance of Thickness Measurements	163
7.1	Selection of Measuring System	163
7.1.1	Manufacturing Control/Quality Control.....	163
7.1.2	In-service Inspection/Residual Wall Thickness Measurement ...	167
7.1.3	Additional Selection Criteria	168
7.2	Selection of Measuring Location	171
7.3	Preparation of Measuring Location	174
7.4	Calibration of the Measuring System	174
7.4.1	General	175
7.4.1.1	Sensitivity Adjustment	175
7.4.1.2	Adjustment of Time Base Range	175
7.4.2	Ultrasonic Equipment with A-scan Display	176
7.4.2.1	Adjustment of Single Transducer Probes.....	176
7.4.2.2	Adjustment of Single Transducer Probes with Delay Path	179
7.4.2.3	Adjustment of Twin Probes.....	179
7.4.3	Digital Indicating Wall Thickness Gages.....	180
7.5	Measuring Process.....	182
7.6	Special Measuring Problems/Special Measuring Techniques ...	183
7.6.1	Measurements on Coated Surfaces.....	183
7.6.2	Thickness Measurements on Plastic Components Produced from Fibre Glass Laminate (reinforced).....	188
7.6.2.1	General	188
7.6.2.2	Practical Fibre Glass Applications	188
7.6.2.3	Problems Associated with Ultrasonic Examination.....	189
7.6.2.4	Probe and Ultrasonic Equipment	190
7.6.2.4.1	Probe Selection.....	190
7.6.2.4.2	Equipment Selection.....	193
7.6.2.5	Options and Limitations	193
7.6.2.6	Examples.....	194
7.6.3	Measurements in the Production Area.....	197
7.6.4	High Frequency Precision Thickness Measurement.....	199
7.6.5	Thickness Measurement at High Temperatures.....	202
7.6.5.1	General	202
7.6.5.2	Selection of Measuring Equipment	203
7.6.5.2.1	Selection of Measuring Gage.....	203
7.6.5.2.2	Probe Selection.....	204
7.6.5.2.3	Couplant Selection	207

7.6.5.2.4	Cables, Connections, Accessories.....	207
7.6.5.3	Adjustment	208
7.6.5.4	Measurement.....	208
7.6.6	Residual Wall Thickness Measurements of a Galvanizing Pan under Operational Conditions	210
7.6.6.1	General	210
7.6.6.2	Test Techniques	211
7.6.6.2.1	Ultrasonic Probes.....	211
7.6.6.2.2	Evaluation and Documentation System	213
7.6.7	Immersion Test Technique	215
7.6.8	Measurements under Water (Offshore).....	217
7.6.9	Thickness Measurement Using Electrodynamic Ultrasonic Generation	218
7.6.10	Corrosion Detection with Guided Waves	222
7.6.10.1	General.....	222
7.6.10.2	Principle of Measurement.....	223
7.6.10.3	Probe, Generation and Reception of SH-Waves.....	224
7.6.10.4	Results and Examination Concept.....	225
7.6.11	Measurement in Potentially Explosive Areas.....	228
8	Documentation and Classification of Measuring Results	229
8.1	Fundamental Principles.....	229
8.2	Recording Results	232
8.3	Evaluation and Documentation of Results	233
9	Automated Thickness Measurement	238
9.1	Introduction	238
9.2	Production Testing	238
9.2.1	Component Tolerances	238
9.2.1.1	General	238
9.2.1.2	Automated Production Examination Illustrated e.g. with Thickness Measurement of Steel Pipes	239
9.2.2	Production Control.....	243
9.3	In-service Inspection	244
9.3.1	Corrosion Determination.....	244
9.3.2	Evaluation and Logging of Measured Values.....	245
9.3.3	Example: Long Distant Pipe Lines	246
	Appendix	253
	Literature List	268
	Index	275
