## Handbook Automated Ultrasonic Testing Systems

## **IIW Handbook**

## **TABLE OF CONTENTS**

1	PURPOSE AND SCOPE	7
2	TERMS AND DEFINITIONS	7
3	BASIC SET-UP OF THE TEST EQUIPMENT	7
3.1	Test equipment	7
3.2	Basic structure	9
3.3	Levels of automation	13
4	TEST-RELATED TECHNICAL OBJECTIVES AND CONDITIONS	14
4.1	Examination task	14
4.2	Basic conditions	14
4.2.1	Density, velocity and scope of examination	15
4.2.2	Particular environmental conditions	16
4.2.3	Particular material characteristics	16
4.2.4	Complex component geometries	17
4.3	Examination data	19
4.4	Reference specimens	19
5	COMPONENTS AND PERFORMANCE OF A TEST EQUIPMENT	20
5.1	Test mechanics and positioning systems	20
5.2	Coupling techniques	22
5.2.1	General	22
5.2.2	Testing environment requirements	22
5.2.3	Ultrasound-related requirements	23
5.2.4	Coupling through liquids	23
5.2.5	Coupling through gases	23
5.2.6	Coupling through solids	23
5.3	Probes	25
5.3.1	General	25
5.3.2	Piezoelectric probes	25
5.3.2.1	Transducer materials for piezoelectric probes	26
5.3.2.3	Probe types	27
5.3.2.4	Array probes	29

5.3.2.5	Special designs	31
5.3.3	Electromagnetic acoustic transducer (EMAT)	31
5.3.4	Laser ultrasound	32
5.3.5	Special requirements for ultrasonic probes	32
5.3.5.1	Environmental conditions	32
5.3.5.2	Test object	33
5.3.5.3	Test scope	33
5.3.5.4	Ease of Maintenance and replacement	33
5.4	Ultrasound electronics and digitisation	34
5.4.1	Transmission and reception system	34
5.4.1.1	Transmitter	34
5.4.1.2	Receiver	34
5.4.1.3	Main amplifier and attenuator	35
5.4.1.4	Filter	35
5.4.2	Digitisation	35
5.4.2.1	Analogue-to-digital conversion	35
5.4.2.2	Signal averaging	37
5.4.2.3	Time-of-flight measurement	38
5.5	Data acquisition, on-line data processing and storage	39
5.5.1	Hardware	39
5.5.2	Software	39
5.5.3	Relation to object co-ordinates	40
5.5.4	Data acquisition and data reduction	41
5.5.5	Data storage	45
5.6	Data representation, evaluation and assessment	46
5.6.1	Representation of data	47
5.6.2	Evaluation of data	51
5.6.3	Assessment	51
5.7	Process control	57
5.8	System check	58
6	PERFORMANCE OF TESTS	59

6.1	System setting and adjustment	59
6.2	Testing	60
6.3	Interferences during testing	60
6.4	Evaluation and assessment	60
6.5	Documentation	61
7	PERFORMANCE PROOF	62
7.1	General considerations	62
7.2	Contents of the performance proof	62
7.3	Execution of a performance proof	63
7.4	Documentation of a performance proof	63
8.	EXAMPLES	65
8.1	Examination of laser welds on a truck indexing gear-wheel	65
8.1.1	Basic set-up of the testing system	65
8.1.2	Test-related technical objectives and conditions	65
8.1.3	Components and features of the testing system	65
8.1.4	Test execution	66
8.2	Automated ultrasonic testing of welds in aluminium pipes	68
8.2.1	Basic set-up of the test system	68
8.2.2	Test-related technical objectives and conditions	68
8.2.3	Components and features of the test system	69
8.2.4	Test execution	69
8.3	Ultrasonic testing of heavy steel plates	72
8.3.1	Basic set-up	72
8.3.2	Test-related technical objectives and conditions	73
8.3.3	Components and features of the test system	73
8.3.3.1	Probes	74
8.3.3.2	Test mechanics and process control	74
8.3.3.3	Test electronics and evaluation software	74
8.3.4	Test procedure	75
8.3.5	Evaluation of the test results	75
8.3.5.1	Test sensitivity and function control with a reference plate	76

8.4	Automated ultrasonic testing of a boiling water reactor pressure vessel	78
8.4.1	Basic set-up of the testing system	78
8.4.2	Test-related technical objectives and requirements	78
8.4.3	Components and features of the testing system	78
8.4.4	Test execution	79
8.5	Automated scanning of a forged shaft using ultrasonic echo tomography	81
8.5.1	Basic set-up of the testing system	81
8.5.2	Test related technical objectives and conditions	82
8.5.3	Components and features of the testing system	82
8.5.4	Test execution	83
8.5.5	Evaluation of the measurement results	84
8.6	Ultrasonic crack detection in pipelines	86
8.6.1	Basic set-up of the test system	86
8.6.2	Testing objectives and conditions	86
8.6.3	Components and features of the test system	86
8.6.4	Test execution	87
8.7	Under-floor test facility for wheel sets of high-speed trains	90
8.7.1	Basic set-up of the test system	90
8.7.2	Technical test objectives and conditions	90
8.7.3	Components and features of the test system	91
8.7.4	Test execution	93
8.8	Ultrasonic testing of steel billets	94
8.8.1	Basic set-up of the test system	94
8.8.2	Test-related technical objectives and conditions	94
8.8.3	Components and features of the KNPS ECHOGRAPH test system	96
8.8.3.1	Ultrasound electronics ECHOGRAPH 1150	96
8.8.3.2	Data management, registration and link to the control computer	96
8.8.3.3	Probes and probe carriers	96
8.8.3.4	Test mechanics	97
8.8.3.5	Processing of the coupling agent (KMA)	97

8.8.3.6	Electronic encoders	97
8.8.3.7	Colour marking	98
8.8.3.8	Optical and acoustical signal unit	98
8.8.3.9	Process control	98
8.8.4	Test execution	100
8.9	Examination of aluminium shells with EMAT probes	101
8.9.1	Basic set-up of the test system	101
8.9.2	Technical test-objectives and conditions	101
8.9.3	Components and features of the test system	102
8.9.4	Test execution	104
9.	LITERATURE	105
10.	STANDARDS AND GUIDELINES	106
