

### 1 Tables

American unit conversions .....	16
Degrees Fahrenheit in Celsius .....	22
Inch fractions .....	23
Coefficient of linear expansion .....	24
Specific thermal capacity .....	25
Density of technical ferrous alloys .....	26
Density of liquid metals .....	27
Bulk Densities of various substances .....	28

### 2 Energy, environment, occupational safety

Occupational safety .....	32
Classification and labelling elements .....	36
Heat recovery .....	46
Controlling in the foundry .....	48
Energy efficiency .....	56
Exhaust air .....	80
<b>Bibliography and Sources</b> .....	83

### 3 Pattern and mould making

Selected standards .....	86
Classification of patterns .....	87
Technical terminology .....	88
Grades .....	90
Shrinkage allowances .....	93
Draughts .....	95
Contactless measuring technology .....	97
Electrochemical machining .....	102
<b>Bibliography and Sources</b> .....	104

### 4 Manufacturing methods

Casting process simulation .....	108
Generative manufacturing methods .....	123
Moulding and coremaking process .....	131
Feeding technique .....	138
Investment casting .....	149
Lost Foam .....	162
Gravity die casting .....	172
Surface treatment and coating .....	182
<b>Bibliography and sources</b> .....	189

**5 Die casting**

Properties of die casting alloys ..... 192  
Dimensional accuracy of the die cast parts ..... 211  
Process parameters ..... 214  
Gating system ..... 224  
Die cast parts, temperature profiles and holding times ..... 228  
Demoulding die cast parts ..... 240  
Heating and cooling the moulds ..... 245  
Vacuum process ..... 252  
Special die casting processes ..... 260  
Process development ..... 264  
**Bibliography and sources** ..... 267

**Clean Air. Save Energy.**  
The filter expert for your foundry.

**Energy efficient  
extraction and  
air filter systems**

### 6 Moulding Materials

Moulding base materials .....	264
Binder systems .....	274
Inorganic binders .....	279
Organic binders .....	284
Bentonite bonded moulding material .....	286
Cooling bentonite bonded moulding materials .....	304
Volume, Mass, Density, Bulk Density .....	328
Lustrous carbon former .....	331
Moulding material testing .....	333
High-temperature deformation behaviour .....	339
Coating .....	346
Regeneration .....	350
<b>Bibliography and sources</b> .....	<b>354</b>

### 7 Materials

Energy consumption .....	366
Pouring and measurement .....	373
Charge make-up and treatment .....	375
Residual substance analysis .....	384
Refractory material .....	385
Melting metals .....	417
<b>Bibliography and sources</b> .....	<b>419</b>

### 8 Materials

Selected standards .....	424
World production .....	430
Cast iron fundamentals .....	431
Cast iron with flake graphite .....	442
Material datasheets .....	444
Heat treatment .....	448
Cast iron with nodular graphite .....	452
Cast iron with vermicular graphite .....	457
Austempered cast iron .....	464
Austenitic cast iron .....	468
Wear Resistant cast iron .....	473
Special cast iron .....	476

Malleable cast iron .....	478
Superalloys .....	481
Aluminium cast materials .....	487
Aluminium cast materials – influence of addition elements .....	502
Aluminium cast materials – hot cracking tendency .....	506
Aluminium casting alloys .....	511
Aluminium cast materials – piston alloys .....	516
Aluminium cast materials – HIP treatment .....	521
Magnesium .....	524
<b>Bibliography and sources</b> .....	<b>538</b>

**STROBEL**   
**QUARZSAND**

Increasing quality standards for foundry products require new sands which have been processed in the best way possible. Our modern processing facilities enable us to deliver those products exactly to the customers requires. We produce silica sands in grain sizes ranging from AGS 0,09 mm to 0,30 mm. For special applications or for specific surface improvements we offer special sands up to AFS 250.

### 9 Material and casting testing/inspection

#### *Destructive material testing*

Tensile test .....	544
Hardness test .....	564
Mobile hardness testing .....	582
Notched-Bar impact test .....	590
Fracture mechanics test .....	596
Dynamic strength test .....	600

#### *Non-Destructive testing*

X-ray/CT .....	607
Acoustic material testing .....	616
Ultrasonic testing .....	621
Penetrant test .....	624
Magnetic particle test .....	626
3-D Digitalisation .....	628
<b>Bibliography and sources</b> .....	<b>632</b>

### 10 Metallography

Selected standards .....	634
Occupational safety and environmental protection .....	636
Introduction .....	637
Specimen preparation .....	638
Structural contrasting .....	643
Structural examination .....	652
<b>Bibliography and sources</b> .....	<b>682</b>
