

Table of contents

Preface

1	Introduction in welding and cutting underwater	1
	Literature	2
2	Development and significance of underwater welding technology	4
2.1	General aspects	4
2.2	Welding in wet environment (wet and semi wet procedures)	5
2.3	Welding in hyperbaric dry atmosphere	9
	Literature	13
3	Research and development activities at GKSS Research Center, Geesthacht (Branch “Underwater-Technology” at the Institute for Plant-Technology)	14
3.1	The Institute for Plant-Technology	14
3.2	GKSS diving systems for technical operations	16
3.2.1	The underwater laboratory “Helgoland”	16
3.2.2	GKSS underwater welding habitat	18
3.2.3	GKSS underwater simulation plant (GUSI) – general information	19
3.2.3.1	Description of single components of the total system	23
3.2.3.1.1	The living area	23
	Living and rescue chamber A5	23
	The medical treatment chamber A6	25
	The central chamber A3	26
3.2.3.1.2	The working area	27
	Chamber A3u for wet experiments	27
	The main working and test chamber A1	28
3.2.3.2	High pressure orientation chamber A8	32
3.2.3.3	30 bar (dry hyperbaric) welding chamber	33
3.2.3.4	The high-pressure orientation chamber D10	34
3.2.3.5	The chamber assembly truck	35
3.2.3.6	The diving tank	36
3.3	Breathing and chamber gas control	37
3.3.1	The central gas store	38
3.3.2	The welding gas absorber system	38
3.4	Certain special requirements for the plant, equipment for divers for the safe work under wet and dry conditions down to very deep waters	39
	Literature	43
4	Contemplation of targets of GKSS research activities in underwater techniques	45
4.1	Characteristics of experimental procedures in wet welding trials – safety observations	45
4.2	Techniques for the underwater operation	46
4.2.1	Development of the underwater welding technique in Germany	47
4.2.2	Peculiarities of hyperbaric welding	48
4.2.3	Welding in wet environment	49
4.2.3.1	Performance of manual wet welding	54
4.2.3.2	Electrode composition	57
4.2.3.3	Diameter of the electrode	61

4.2.3.4	Carbon equivalent and temper bead welding	61
	Literature	62
5	Processes, machines, systems and additional equipment for underwater welding and cutting	64
5.1	Power sources for manual underwater arc welding	64
5.1.1	Electrical converters or direct current generators	64
5.1.2	Welding generators of older design	64
5.1.3	New designed direct current arc welding converter (inverter)	66
5.2	Power source for fully mechanised wet welding	68
5.2.1	Wire feeding unit	69
5.2.2	The welding torch	71
5.2.2.1	The welding torch for wet manual arc welding with stick-electrodes	71
5.2.2.2	Welding torch for wet welding with filler wire	71
5.2.3	Results achieved in flux cored arc welding	72
5.3	Development of hyperbaric dry welding systems	73
5.3.1	Hyperbaric orbital welding with TIG and MIG/MAG processes	73
5.3.2	Moss – modular orbital welding system for atmospheric and hyperbaric application	74
	Literature	75
6	Developments and experiments in hyperbaric wet welding	77
6.1	Welding with heterogeneous consumables	78
6.2	Welding with the same type of consumables	80
6.3	Influence of the surrounding water conditions	83
6.3.1	The influence of the water depth onto the porosity	84
6.4	Mechanical and technological characteristics	84
6.5	Chemical composition	86
6.6	Hydrogen in a wet welded joint	88
	Literature	94
7	Hyperbaric dry welding	95
7.1	General remarks	95
7.2	Welding procedures and their field of application	96
7.3	Test equipment for welding in hyperbaric dry atmosphere	97
7.3.1	General remarks on the construction and built up of constructions and equipments for hyperbaric dry application	97
7.3.2	Two-axis-girder welding system	98
7.3.3	Orbital welding system	98
7.3.4	Welding with robot system	101
7.4	Basic research activities for welding in hyperbaric dry atmosphere	102
7.4.1	Arc behaviour under hyperbaric conditions	103
7.4.2	Metallurgical investigations on hyperbaric TIG welding	109
7.4.2.1	Influence of the chamber gas on the results in TIG welding	109
7.4.2.2	Results of mechanic-technological basic research activities for the hyperbaric TIG welding process with added separate wire (on bead-on-plate as well as on ordinary joint welds)	111
7.4.3	Procedure development for hyperbaric dry MAG welding in different chamber gases (experimental conditions)	114
7.5	Systems development for hyperbaric orbital MAG welding	124
7.5.1	Experimental set-up and test performance	125
7.5.2	Material transition, process stability and welding parameters	130

7.5.2.1	Quality characteristics of hyperbaric MAG welded seams	132
7.5.3	Hyperbaric MAG welding with an industrial robot	142
7.6	Modular orbital welding system (MOSS)	151
7.6.1	Description of the system	152
7.6.1.1	The orbital welding head and further modules	152
7.6.1.2	Steering mechanism and control	154
7.6.1.3	System qualification and outlook	155
	Literature	156
8	Description of a repair procedure with an autonomous diverless underwater station	161
8.1	System description	162
8.2	Description of a possible pipeline repair by an autonomous system	163
	Literature	166
9	Experiences with underwater repairs by wet welding	167
9.1	Successful platform repair (Montrose) on the coast of England	167
9.2	Ship repair by underwater wet welding	170
9.2.1	Repair performance	171
9.3	Bulkhead repair	173
9.3.1	Performance of the repair procedures	175
9.4	Damage repair of a high water protection wall	177
9.4.1	Performance of the repair procedure	179
	Literature	182
10	Research activities in fatigue strength for valuating underwater wet welded joints	183
10.1	Introduction	183
10.2	Test program for the evaluation of new electrodes and the fatigue tests	184
10.3	Small scale test pieces	188
10.3.1	Test piece dimension	190
10.3.2	Performance of the fatigue tests	190
10.3.3	Evaluation of the small-scale test pieces and presentation of the results	191
10.4	Research activities with pipe sleeve connections (construction components)	194
10.4.1	Design forms	195
10.4.2	Preparation of the test pieces	195
10.4.3	Experimental performance and evaluation of the experiments	197
10.4.4	Accompanied experimental calculations	199
10.4.5	Residual stresses	200
10.5	Conclusions	202
	Literature	205
11	Laser beam welding under hyperbaric conditions	208
11.1	Orientating laboratory tests	208
11.1.1	Pressure chamber experiments	209
11.1.2	Laser beam guidance	210
11.1.3	Work piece positioning	210
11.1.4	Gas supply and pressure regulation	211
11.1.5	Operational control of the test chamber	211
11.2	Experimental laser	211
11.2.1	CO ₂ laser	211

11.2.2	Nd:YAG laser	214
11.3	Work piece processing with the Nd:YAG laser under hyperbaric conditions	217
11.3.1	Problem specification	218
11.3.2	Container station	218
11.3.3	Experimental laser system	219
11.3.3.1	Fiberglass cable	220
11.3.3.2	Laser beam welding and cutting heads	221
11.4	Laser beam cutting in hyperbaric dry atmosphere	226
11.4.1	Cutting experiment with the miniature laser head	226
11.5	Laser beam welding under hyperbaric wet conditions	230
11.5.1	Development of a nozzle to produce a localized water free zone	230
11.5.2	Development of a nozzle for curved surfaces	236
11.6	Results of laser beam welding in hyperbaric dry and wet environment	238
11.6.1	Laser beam welding in hyperbaric dry environment	238
11.6.2	Removal of cracks by laser beam welding	243
11.6.3	Laser beam welding in hyperbaric wet environment	244
11.7	Conclusions	246
	Literature	247
12	Underwater cutting	248
12.1	Underwater cutting with the petrol torch	248
12.2	Underwater cutting with the hollow electrode	249
12.3	Underwater cutting with the Oxygen lance	250
12.4	Underwater cutting with special electrodes	252
12.5	Underwater metal cutting machine	253
12.6	Water jet cutting	254
12.7	Underwater cutting with rotating disc (underwater angle sander)	255
12.8	Development of further underwater cutting procedures	255
12.8.1	CMAG technology	255
12.8.2	Thermal cutting with coal electrodes (CMAC process)	256
12.8.3	Further process developements	256
	Literature	257
13	Development of seam identification and tracking systems	259
13.1	Specifications for a hyperbaric applicable camera system	259
13.2	Tubular cameras	260
13.2.1	General operation mode	260
13.2.2	Tubular cameras for hyperbaric application without pressure housing	261
13.2.3	Application of tube cameras in hyperbaric welding with a pressure tight housing	261
13.3	CCD cameras	262
13.3.1	General description of the system	262
13.3.2	Black and white cameras for hyperbaric application	262
13.3.3	CCD colour cameras	263
13.4	Development of a seam identification and tracking system	263
13.4.1	Experimental performance	264
13.4.1.1	Orientation experiments under atmospheric conditions	265
13.4.1.2	Orientating experiments under hyperbaric conditions	266
13.4.1.3	Results and critical evaluation of the orientating trials	266
13.5	System trials with hyperbaric welding procedure	267
	Literature	269

14	Underwater thermal spraying	270
14.1	Experimental set-up	270
14.2	Underwater grit blasting	272
14.3	Application of propane and hydrogen in high-speed flame spraying underwater	273
14.4	Experimental results	274
14.5	Heat-treatment of welded joints under water	275
14.5.1	Preliminary remarks and experimental set-up	275
14.5.2	Results and conclusions	277
	Literature	281
15	Qualification of skilled personal, work protection and health care	283
15.1	Specifications for divers and diving contractors in Germany	283
15.1.1	Commercial diver for industry and handicraft	283
15.1.2	Divers of the GDFW	286
15.1.3	Army divers as professional divers	288
15.2	Hints for the job- and health precautions (supervising authorities) in Germany	288
15.2.1	Employers liability insurance	288
15.2.2	The German Lloyd (GL/DNV)	289
	Literature	289
16	Standards, rules and regulations in underwater technology	291
16.1	Standards	291
16.2	Guideline VDE 0100-200	293
16.3	Guidelines, technical codes and technical bulletins of DVS	293
16.4	International guidelines and regulations	295
17	Additional literature, issued on the experimental work of GKSS Research Center (Presentations on national and international symposia and conferences and also papers in proceedings and recognised trade)	297
	Hyperbaric wet welding	297
	Hyperbaric dry welding	299
	Health and safety regulations, test procedures	301
	Finite element calculations and theoretical considerations	302
	Chamber technology	304
	Corrosion protection and weld bead tempering	305
	Seam tracking systems	306
	Training and education	306
	Multi-phase flow and water jetting	307
	Laser application under water	307
