«DER PRAKTIKER» is the trade journal for all the fields of joining technology application and fabrication – above all for small and medium-sized enterprises and skilled trade businesses. From practice for practice, the welding, brazing/soldering, adhesive bonding and coating processes are examined in greater detail in application-oriented specialist articles. Month in month out, the reader learns everything important from the following sections: industry and skilled trades, quality management and standardisation, health and safety and environmental protection as well as legal questions and judgements. «DER PRAKTIKER» is thus essential reading for everybody dealing with joining technology in daily operational practice.
→ www.derpraktiker.de

«SCHWEISSEN UND SCHNEIDEN» is the technical-scientific trade journal for welding, cutting and brazing/soldering technology, including the numerous peripheral areas. Month in month out, proven experts report on the results of development and research work from all sectors of industry and pass on their experience for the application of welding technology in practice. «SCHWEISSEN UND SCHNEIDEN» is thus an important source of information and decisions for the research, teaching, economic and industrial fields.
→ www.schweissenundschneiden.de

The English-language «WELDING AND CUTTING» is an international trade journal which is editorially oriented to welding, cutting and brazing/soldering technology, including the numerous peripheral areas. It includes regular and comprehensive reports from industry, science and the practice of the welding technology sector, takes up not only new developments but also economic questions and thus serves as an important source of information which is used by an international expert public throughout the world.
→ www.welding-and-cutting.info

«JOINING PLASTICS – FÜGEN VON KUNSTSTOFFEN» as a bilingual title (German/English) deals exclusively with the title subject. Application-oriented specialist articles indicate the newest developments and the state of the art for series welding and for the joining of plastics in pipeline and tank construction and apparatus engineering. Furthermore, the reader learns everything important from the sections entitled companies, quality management and standardisation, research and development as well as safety at work and environmental protection.

Thermal Spraying is a relatively young coating technology. Nevertheless, spraying technology has become established very quickly and, until today, has been the first-choice process in many branches of industry when economically viable, large-area and functional coatings are demanded. Due to the large number of process variants, it is possible to apply nearly every material to almost any imaginable base materials. The trade journal «THERMAL SPRAY BULLETIN» takes up this technology in a journalistic form and publishes in two languages (German/English) not only application-oriented specialist articles about the newest developments and the state of the art but also reviewed scientific specialist articles.
